

HOW TO TELL THE DIFFERENCE BETWEEN THE Gx+ AND THE UPDATED Gx+2011 MODEL SCANNERS

Colortrac made a change to the Gx+ line of scanners (28", 42" and 56" models). The exact date of introduction varied for each size of scanner. Please see the pictures below for how to tell the scanner types apart.

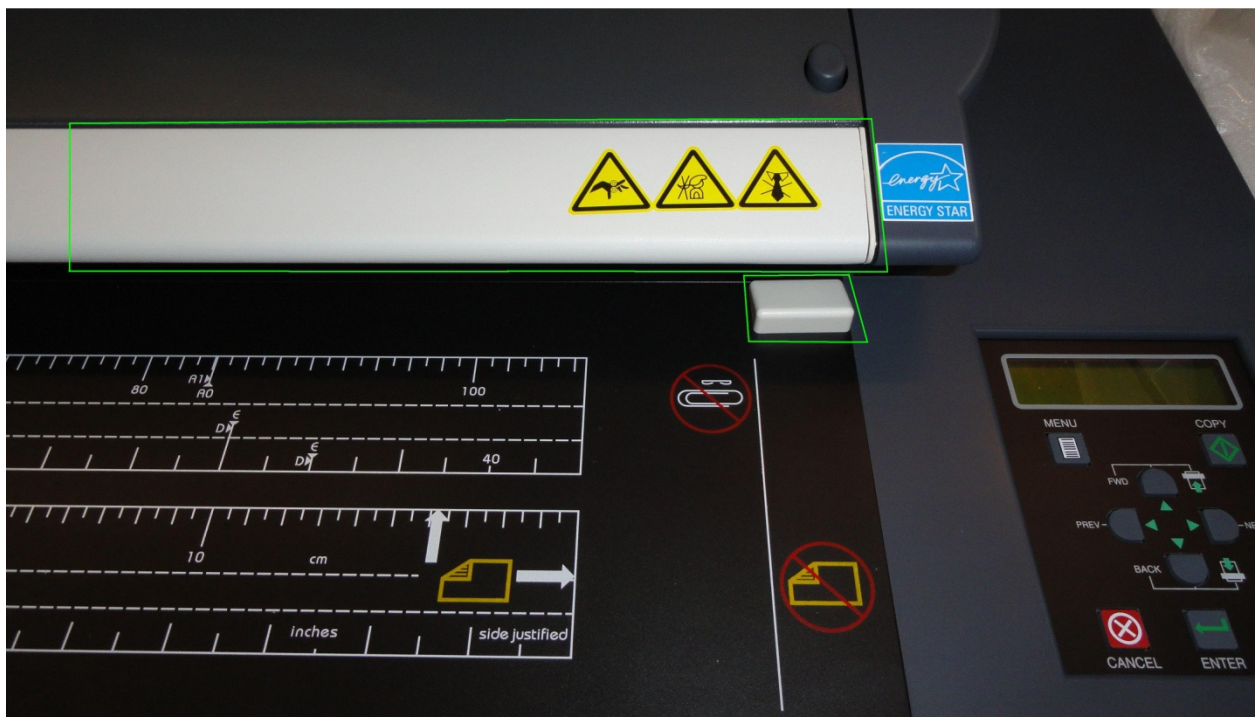

If you open the lid, the regular version of the Gx+ will have 4 paper sensors paired up front to rear. (red squares)

The updated Gx+2011 version will also have one or more single paper sensors in between the paired ones. (green squares and red squares)

The Gx+ scanner has a silver leading edge on the lid and no paper stop.

The updated Gx+2011 scanner has a white front edge on the lid and a white paper block.
